

RAINWATER HARVESTING

DESCRIPTION

In recent years, more and more is said about the use of rainwater, not only for environmental reasons but also for economic reasons. A rainwater utilization system consists in driving rainwater towards storage tanks for later pump at the supply points or a central distribution tank. Compatible with any existing installation, this control system will help and protect you from all incidents. It can cause the leakage of water in any pipe of your home.

APPLICATIONS

In a home, only one-third of the water we consume needs to be potable, being able to use rain or water recycled, for other uses, such as unloading of tanks, irrigation, cleaning of clothes, cleaning of vehicles, etc. Rainwater can be used for various applications, being the most common ones:

- Toilets cisterns
- Washing of floors
- Washing machine
- Irrigation of landscaped areas
- Washing of floors
- Washing of vehicles
- Cleaning of surfaces and industrial vehicles
- Water storage tank against fires
