

# ELECTRIC CONTROL PANELS FOR FOUNTAINS

Electrical panels and electronic equipment for the control of all kinds of fountains. We have a technical team specialized in the design and assembly of custom panels. By the latest control technologies we can realize any fountain design that you can imagine. It incorporates technology with control by microcontroller of maximum reliability and stability of operation.

- Selection of sequence time.
- Selection of the cyclic sequence.
- Selection of fixed manual speed.
- Etc ...

- Electronic control by microcontroller. Equipped with selectable programs.
- Selector manual-stop-automatic with manual selection with fixed height, automatic start and stop with cyclic sequence.
- Selector manual-stop-automatic time switch to start and shutdown by time.
- Selection of the time that the fountain is in the fixed position of each sequence.
- Selection of cyclic sequence. Selecting the fixed speed manual.
- Control system water level that maintains the optimum level for the operation of the source.
- General protection with MCCB. Mounted IP65 panel.
- Easy installation and programming. Simplicity wiring box. Reducing installation costs.
- Auxiliary input from different sensors for different options.
- Protection and control of pumps and valves of the fountain.
- Ability to include safety sensors or automation according to specifications.
- You can change the programming of the water games the software.
- Check for other options. Possibility of programming and custom assemblies.
